                                                                                                                                                                                                                                                                                                                     The present DNA sequence is a fusion construct, comprising the N-terminal region of mature human interleukinz (ILZ) and soluble CD39 (solCD39) coding region, having apyrase activity. This results in high levels of coding region, having apyrase activity. This results in high levels of solCD39 expression and activity in the transfected cells. Soluble CD39 is constructed by removing the N- and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP-induced platelet activation and recruitment, including platelet aggregation. Soluble CD39 polypeptides are useful for inhibiting anglogenesis It is useful for the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, precelampsia, embolism, platelet-associated ischaemic disorders including lung, coronary and cerebral ischaemia, thrombosis intracardiac and venous thrombosis, coagulopathy, deep venous thrombosis (DVI), pulmonary combosis, coagulopathy, deep venous thrombosis (DVI), pulmonary coronary and thrombus formamication or reformation, occlusion, reocclusion, recoclusion,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             540

The present cDNA sequence is a fusion construct encoding sol(soluble) CD39 having apyrase activity. Fusion of 12 amino acids from the N-terminus of mature human LI2 to the solCD39 coding region results in high levels of both expression and activity in the supernatants of transfected cells. This is used in the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atheroselerosis, peripheral vascular occlusion, preeclampsia, embolism, platelet-associated ischaemic sischaemia, a thrombosia, embolism, platelet-associated ischaemic ischaemia, a thrombosis, including occonary attery thrombosis, cerebral attery thrombosis, including cononary attery thrombosis, thrombosis, coagulopathy, deep venous thrombosis (bur), pulmonary embolism (PE), transfent ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, reocclusion, stenosis or restenosis of blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180

```
cc mature N-terminus of hIL2 and soluble CD39 (solCD39) coding region, having apyrase activity. This produces high levels of solCD39 expression and activity in the transfected cells. Soluble CD39 is constructed by removing the N- and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP-induced platelet activation and concentrations and the ability to block and reverse ADP-induced platelet activation and concentrations and the ability to block and reverse ADP-induced platelet activation and constant and reverse ADP-induced platelet activation and constable angina, myocardial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vacular occlusion, precelampsia, corinity, atherosclerosis, peripheral vacular occlusion, precelampsia, coronary and cerebral ischaemia, thrombocit disorders including lung, coronary and cerebral artery thrombosis, intracardiac and venous thrombosis, coagulopathy, deep venous thrombosis (DVF), pulmonary embolism (PE) and transient ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, reocclusion, corrected to the preventing thrombus formation or reformation, occlusion, reocclusion, corrected to the coronary activated to the coronary activated to the coronary activated thrombosis of blood vessels or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          552

The present sequence is coding region of pIL2SolCD39, a fusion construct encoding sol (soluble) CD39 having apyrase activity. Fusion of 12 amino acids from the N-terminus of mature human IL2 to the solCD39 coding region results in high levels of both expression and activity in the supernatants of transfected cells. This is used in the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, preeclampsia, embolism, platelet-associated ischaemic disorder including lung coronary artery thrombosis, cerebral ischaemia, thrombotic disorder including coronary artery thrombosis, cerebral artery thrombosis, intracardiac thrombosis, peripheral artery thrombosis, venous thrombosis, thrombosis, coagulopathy, deep venous thrombosis, venous thrombosis, thrombosis, pransition careformation, collusion, reocclusion, stenois or restenosis of blood vessels or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              132

acids from the mature N-terminus of hIL2, a linker, FLAG tag sequence and soluble CD39 (solCD39) coding region, that has apyrase activity. This produces high levels of solCD39 expression and activity in the transmembrane domains. It retains the capacity to metabolise ATP cerminal transmembrane domains. It retains the capacity to metabolise ATP concentrations and the ability to Diock and reverse ADP-induced platelet activation and recruitment, including platelet aggregation. Soluble CD39 polypeptides are useful for inhibiting considerations and recruitment including platelet aggregation. Struke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, precediampsia, embolism, creatment of schaemia, thrombotic disorders including lung, coronary and cerebral ischaemia, thrombosis, intracardiac and venous thrombosis, capacity, pulmonary embolism (PE) and transient ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, reocclusion, stenosis or restenosis of blood vessels or stroke
                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  289

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is the cDNA encoding the human soluble CD39 protein, a cell surface molecule, having apyrase activity. It is derived from a human B cell line CDNA library, referred to as MP-1. Soluble CD39 is constructed by removing the N- and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP-induced platelet activation and recruitment, including platelet aggregation. Soluble CD39 polypeptidess are useful for inhibiting angiogenesis. It is useful for the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, precclampsia, embolism, platelet-associated ischaemic disorders including lung, coronary and cerebral ischaemia, thrombosic disorders including coronary, peripheral and cerebral artery thrombosis, intracardiac and venous thrombosis (DVT), pulmonary

The present cDNA sequence encodes soluble CD39 having apyrase activity.

This was derived from a cDNA library prepared from a human B cell line
referred to as MP-1. Soluble CD39 retains the capacity of wildtype CD39

to metabolise ATP and ADP at physiologically relevant concentrations as
well as the ability to block and reverse ADP-induced platelet activation

c and recruitment including platelet aggregation. This is used in the

creatment of unstable angina, myocardial infarction, stroke, coronary

c artery disease or injury, atherosclerosis, peripheral vascular occlusion,

preclampsia, embolism, platelet-associated ischaemic disorder including

cung ischaemia, ocronary ischaemia and cerebral ischaemia, a thrombotic

disorder including coronary attery thrombosis, cerebral artery

thrombosis, intracardiac thrombosis, peripheral artery thrombosis, thrombosis, coagulopathy, deep venous thrombosis, (DVT),

pulmonary embolism (PE), transient ischaemic attack. Soluble CD39 is also

useful for preventing thrombus formation or reformation, occlusion,

c reocclusion, stenosis or restenosis of blood vessels or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              41 GTTCAACCCAGAACAAAGCATTGCCAGAAAACGTTAAGTATGGGATTGTGCTGGATGCGG 100

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TCAGCATAGTCCCATATGAAACCAATAATCAGGAAACCTTTGGAGCTTTGGACCTTTGGGG
                                                                                                                                                                                                                                                                                                    The present invention relates to a method of treating cardiovascular disease in a subject, comprising administering an IL-17, IL-18, 4-1BB CD30 or OX40 antagonist. The IL-17, IL-18, 4-1BB, CD30 or OX40 antagonists are useful for treating cardiovascular disorders, e.g. (chronic immune) myocarditis, congestive heart failure, aneurysms, angina, embolism, restanosis, ischaemia or thrombocytopenic purpura, present sequence is a coding sequence used in the exemplification of invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GCGTGGTGCATCAAGTAGAAGAATGCAGGGTTAAAAGGTCCTGGAATCTCAAAATTTGTTC

Increasing or decreasing drug resistance in target bacteria, yeast, plant or mammalian cells comprises altering ATP gradient across biological membrane of target cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GGTTGACCCCAGAACAAGCATTGCCAGAAACGTTAAGTATGGGATTGTGCTGGATGCGG 196
                                                                                                                                                                                                                                                                                             The present invention relates to a method for increasing or decreasing drug resistance in target bacteria, yeast, plant or mammalian cells by altering the ATP gradient across the biological membrane of the target cell. The method is useful for modulating drug resistance of cells. It inseful for increasing the sensitivity of cells to chemotheraputic and antibiotic agents and increasing resistance to herbicides. The present sequence is human ATP diphosphohydrolase coding sequence. This sequence encodes was used in the present invention to modulate drug resistance. Note: The present sequence is not shown in the specification, but is referred to via its GenBank accession number
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GTTCTTCTCACACAAGTTTATACATCTATAAGTGGCCAGCAGAAAAGGAGAATGACACAG

The invention relates to a conjugate (I) comprising an enzyme and a biodegradable polymer, where (i) enzymatic activity of the enzyme is conjudeate to that of the enzyme in the absence of the blodegradable conjumer, or (ii) the half life of the enzyme is longer than that of the enzyme is longer than that of the caryme in the absence of the polymer. The enzyme is longer than that of the enzyme in the absence of the polymer. The enzyme is a multimeric, soluble and/or extracellular enzyme, preferably an apyrase, especially a soluble form of CD39 and catalyzes or preferably an apyrase, especially a soluble form of CD39 and catalyzes or preferably enzymed of extracellular nucleotides or abnormal levels of extracellular nucleotides or abnormal levels of extracellular nucleotides or abnormal levels of graft transplant. (I) is also used for treating coronary artery disease or injury following myccardial infarction, unstable angina, atherosclerosis, pre-eclampsia, embolism, coronary and thrombosis and coadulopathies associated with exposure to disorders, and thrombosis and coadulopathies associated with angioplasty, carotid endarterectomy, anastomosis of vascular grafts and chronic cardiovascular devices. The present sequence represents a DNA encoding a human CD39 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GGTTGACCCAGAACAAAGCATTGCCAGAAAACGTTAAGTATGGGATTGTGCTGGATGCGG

The bovine aorta (AAW04335 to AAW04318 and AAW04340) and porcine pancreatic (AAW04339) ATPDases have been partially sequenced. The agequences have been found to be highly homologous to a human lymphoid cell activation antigen designated CD39 (Maliazenski et at. (1994). J. Immunol.: 3574-3583). The complete sequences of the ATPDases types I and II have not been obtained yet. Assuming that the CD39 gene product is an ATPDase type II, the use of CD39 in the reduction of platelet aggregation and of thrombogenicity may be contemplated, as well as a process of making ATPDases using the CD39 sequence (AAT38516)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            220
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             233
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GTTCTTCTCACACAAGTTTATACATCTATAAGTGGCCAGCAGAAAAGGAGAATGACACAG 160

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Non-human transgenic or somatic recombinant mammals, whose cells contain a heterologous DNA encoding a polypeptide (especially human CD39 protein) having ATP-diphosphohydrolase activity under cellular activating conditions is claimed. In particular the animal is a pig and its cells (or tissues or organs) can be used for transplantation. DNA coding for human CD39 is also useful for genetically modifying a mammalian cell to render it less susceptible to an inflammatory or immunological stimulus and platelet aggregation. The modified cells can be used to prevent or alleviate a thrombotic condition. The present sequence encodes human CD39 protein and was disclosed in J.Immunol. 153 (8) (1994) 3574-3584
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             100

The invention relates to a composition comprising a plurality of CDNAB Cordetecting the altered expression of genes in an immunological cresponse. The invention also relates to a method of diagnosing or monitoring the treatment of an immunopathological condition in a sample, comprising obtaining nucleic acids from a sample, contacting the nucleic acids of the sample with an array comprising the plurality of cDNAB under conditions to form one or more hybridisation complexes and comparing the levels of the detected hybridisation complexes with the level of hybridisation complexes with the level of hybridisation complexes with the level of hybridisation complexes correlates with the presence of an immunopathological condition. Also disclosed are an expression profile comprising a microarray and a plurality of detectable complexes and condition a plurality of polynucleotide probes. The CDNAB are useful as hybridisable array elements in a microarray for monitoring the expression of target polynucleotides. The microarray can be used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A composition comprising a plurality of CDNAs, useful for detecting altered expression of genes in an immunological response or for diagnosing and treating an immunopathology, e.g. Crohn's disease, asthma or osteoarthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human, gene; 88; immunological response; immunopathological condition; Crohn's disease; asthma; ulcerative colitis; Myereosinophilia; irritable bowel syndrome; osteoarthritis; rheumatoid arthritis; actte monocytic leukaemia; antiinflammatory; antiasthmatic; antiulcer; osteopathic; antiarthritic; antirheumatic; cytostatic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 820
the diagnosis of an immunopathology, such as Crohn's disease, asthma, ulcerative colitis, hypereosinophilia, irritable bowel syndrome, osteoarthritis, rheumatoid arthritis or acute monocytic leukaemia, and in identifying agents for the treatment of the diseases. The microarray may also be used in drug discovery and development, toxicological and carcinogenicity studies, forensics or pharmacogenomics. The composition may also be used in purification of a subpopulation of mRNAs, cDNAs or genomic fragments. This sequence represents a human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                893

The invention relates to a novel pharmaceutical composition active on angiogenesis comprising an endothelial cell nucleic acid whose expression is induced by an angiogenic factor and inhibited by an angiostatic agent or its complement or fragment, a polypeptide sequence encoded by the nucleic acid or its fragment, a molecule capable of inhibiting expression of the nucleic acid or a molecule which binds to the polypeptide sequence. The invention is used to diagnose, prognose or treat an angiogenic disorder in a mammal, particularly a human. The disorder is particularly tumor vascularization, a retinopathy, rheumatoid arthritis, crohn's disease, atherosclerosis, ovary hyperstimulation, psoriasis, endometriosis associated with neovascularization, restenosis due to angiopatsy, overproduction of tissue due to cicatrisation, a peripheral vascular disease, hypertension, vascular inflammation, Raynaud disease, aneurism, arterial restenosis, thrombophlebitis, ischemia, angina, macular disease, thin farction, chronic heart disease, cardiac congestion or macular degeneration due to age or osteoporosis. This sequence
or polypeptide differentially expressed in angiogenesis.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invirrogen.
